 - Drop-down menus
 - Pop-up windows
- Use across multiple platforms
- Reduced training time and user skills required
- Reduced communication costs for multiple shops and remote users
- Reduced hardware and maintenance costs
- Reduced technical support required
- Reduced security issues

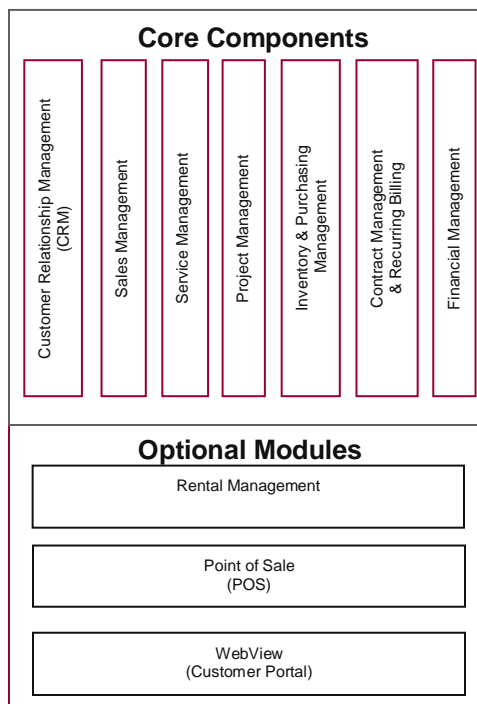

Overview

Today's competitive business environment requires companies to be flexible, responsive, and available to address customer needs on demand.

Systems Implementation opens your doors for business; anytime, anywhere, by providing browser based access to all information. So whether you've got multiple locations, employees on the road, or executives out of the office, conducting business is as easy as opening your internet browser!

Intuitive navigation is provided through a user-friendly interface, complete with drop-down boxes and pop-up windows. That translates into faster initial application deployment and reduced training and technical support costs.

Is it secure? Absolutely. Security is provided through your existing VPN or firewall, and governed by the stringent security of our software and the IBM hardware platform.

MSS^{21e} Value Proposition

- No per user charges
- No software licensing fees
- No charge for version upgrades
- Software enhancements included with maintenance
- Source code provided at no additional charge
- Toll-free telephone support
